

## **Sewer Spill Reductions**

Cleaning our beaches and bays is one of the Mayor's 10 goals set in 2000. Since then, with the support of the City Council, we have begun to see the fruits of that commitment. In 2002, total sewer spills and sewer spills to public waters in the City of San Diego have been reduced by 41 percent when compared to Calendar Year 2000.

There are a number of reasons behind this good news. We have begun a maintenance program that will see the entire 3,000 miles of City sewer lines cleaned by March 2004. We've also developed a new Preventive Maintenance Schedule for 1,500 miles of sewer lines that were not on a regular cleaning schedule. In 2002, we televised and assessed the condition of 428 miles of sewer lines most susceptible to spills and assessed 7,270 manholes. We have initiated the planning and design effort to increase our rate of replacement or rehabilitation of aging sewer lines. In CY 2000, we replaced or rehabilitated 14 miles of sewer lines. This increased to 27 miles in 2001 and 45 miles in 2002. By the end of 2002, we had assessed the sewer lines in 45 urban canyons and completed the cleaning of 35 of those canyon sewer lines.

The result was a reduction in sewer spills and that meant cleaner beaches and cleaner water.
